

director

flexibility
by
design.

director – flexibility by design.

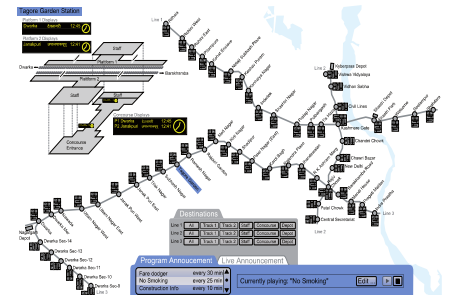

Innovative security- and evacuation management system for various applications, from start up systems to large, distributed network solutions.

director is

- The intuitive user interface for single and multi-monitor operator stations.
- The professional maintenance- and configuration tool for the facile creation of complex user interfaces according to customized requirements. Even in full operation user interfaces can be changed easily and modified immediately to current requirements.
- The system that guarantees particular flexibility regarding assignment of user privileges. Determined user rights can be changed as well as assigned during full operation as requested.
- The software that supports electro-acoustic public address systems like Variodyn D1 at the highest level.

director – simply adjusting.

eqqon

- treads new and innovative paths in the field of integrated security management.
- develops optimal solutions with various application possibilities for enterprises and cooperates with well-known partners like Siemens AG Germany, Medias Pro and many more.
- designs individual systems for public buildings like airports, shopping malls and transit authorities.

The founders of eqqon

Wolfgang Zelenka designed the intelligent public address system Variodyn D1.

Meinrad Recheis conceptualized the innovative configuration software D1 designer for Variodyn D1.

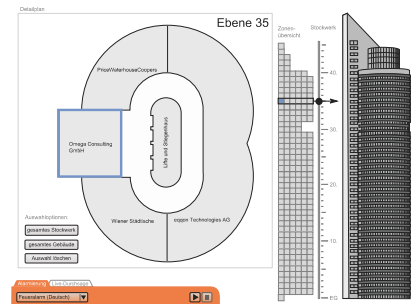

director offers apparent advantages and high professionalism in problem solutions for applications of varying complexity. Each project differs in its requirements; therefore perfect planning and highest flexibility are of great importance.

By using **director**, projects of the most different kind can be realised, from a few up to hundreds of areas and volume regulators. Especially for particularly large and complex systems, simplicity and ease of use are of considerable relevance. The extension of the operating system is easily achievable, e.g. zones can be added and configured by using the drag & drop functionality.

Various user interfaces can be created and adapted easily as required also during full operation.

“We use the software director of eqqon for projects in the fields of security and evacuation management. The easy handling, the individual adaptability and the reliability of this system has convinced us and our customers.”

Horst Löser, SIEMENS AG Germany

director – the flexible solution.

Good reasons for director

Project management and perfect service

We provide comprehensive support – tailored to meet your specific demands – for the realisation of your projects. The service spectrum includes among others consulting, planning, configuration, ongoing support and remote maintenance.

User-friendly handling

It is our aim to enable you the immediate access to your project due to simple operating procedures. The process is carried out by a self-explanatory installation program that automatically installs all applications, ready for use.

Operating concept for easy and secure handling

Our customers appreciate the completely free, individual arrangement and rational administration of all control- and display elements. The manipulation of all items is achieved by simple mouse-click and drag & drop functionality.

User-specific development

Key priority for us is the constant development of the software and configuration tools. Our system facilitates the perfect levelling of various signal sources and amplifiers as well as the intelligent management of the loudspeakers in the system.

Professional user-administration

We focus on one hand on ease of use, on the other hand on professional and intelligent management. Our system allows free definition of allocation and assignment of rights for all users. Determined rights can be changed and reassigned easily in the registration process as well as during full operation.

Schedule and timing control

The module schedule and timing control assists you with a wide range of features like e.g. single or serial appointments and transmission of messages at preset times. This module supports you in your daily work from the simple entry of single or serial appointments up to the complex control of various activities.
